

American Data Group, Inc.
Enterprise Financial and
Utility Billing Software Solutions
for Government

Web Technologies

Choice of Solutions

For its latest generation of software, American Data Group is deploying its product in a server, client and database independent format, allowing you to leverage your existing infrastructure, or maintain pre-specified purchasing requirements.

Built around a Web Server/Browser architecture, Our software has been designed to support numerous server/database/client configurations.

The Following products are currently supported with ADG Web Technology offerings

DBMS

- Oracle 9/10
- MS SQL Server 2000
- IBM DB2 8.1 (Enterprise with NetSearch)
- MySQL 4.0 (Commercial Licensing Required)

Web Servers

- Apache 2.0 (Windows/Unix)
- Microsoft IIS 5/6

Browser

- Microsoft IE6
- Mozilla/Firefox
- Any Other W3C compliant browser

Sample Configurations

The following suggested configurations are made to show the possible wide range of configurations possible with ADG Web Technologies products

Small Organization

- Red Hat Linux Server running Apache Web Server and MySQL, with Windows or Linux clients running Mozilla.

Organization with Microsoft policy

- Microsoft Small Business Server 2003 running SQL server 2000 and IIS 6, with Microsoft Windows clients running IE6

Enterprise Level Organizations

- Red Hat Enterprise Server running Oracle 10, with separate RH servers acting as applications servers running Apache 2 with mixed clients Windows/Linux/Apple
- IBM AS400 running DB2, with Windows 2000 server / IIS 5 running IBM DB2 Connect as application servers and mixed client connections

*The primary goal of our company,
our software and our staff is to make the
accounting process as easy, efficient and
accurate as possible, keeping you, the
customer in mind at all times.*
